

Contoured Bed Wedge

Scalloped area moulds to the contours of the body for added security when sleeping

Gentle support column absorbs vertebral pressure and helps relieve spinal tension

Removable foam insert allows you to change the angle to suit your comfort needs

A specially contoured and adjustable bed wedge with inbuilt support column to gently cushion the spinal arch. For optimal back support, the wedge is mildly angled to minimise pressure to the weight bearing lower vertebrae.

Designed to encourage correct spinal alignment and spread the weight load, the removable foam insert allows you to change the angle from 10° to 15° to suit your optimum comfort needs.

The angle minimises pressure on the sensitive lower back and buttock region, while the contoured scallop surface moulds to the body for added security.

Made from 100% open cell 'breathing' urethane foam and available with either a removable, quilted cover for maximum

comfort or a hospital grade, moisture resistant, bacteria inhibiting Steri-Plus™ cover for maximum infection control and incontinence protection. Covers are machine washable and replacement covers are also available.

Ideal for people suffering medical conditions that require an angled sleeping position such as bronchial or respiratory problems, hiatus hernia, heart conditions or gastric reflux. Designed for use with a low pillow only. Can be used in conjunction with the Contoured Leg Relaxer.

Contoured Bed Wedge

Available with either a
quilted or waterproof cover

Wedge angle is 15°;
10° with insert removed
